

Equivalent Fractions

Equivalent fractions name the same amount using different numbers.

Multiply the numerator and denominator by the same non-zero number.

Worked example: $\frac{1}{2} = \frac{2}{4}$.

Comparing Fractions

Fractions with the same denominator can be compared by their numerators.

Worked example: $\frac{3}{8}$ is greater than $\frac{1}{8}$.

Adding Fractions

Add fractions with the same denominator by adding their numerators.

Worked example: $\frac{1}{5} + \frac{2}{5} = \frac{3}{5}$.
